A study was made of the kinetics of hydrosilicate for-
mation and the dynamics of the hardening of the mate-
rial as a function of the composition of the paste, of
the dispersion of its components, and of the tempera-
ture of the hydrothermal treatment. Results showed
that the rate of inclusion of lime into calcium hydro-
silicates is proportional to the specific surface area of
(Materials--Refractories, IT, v. 5, no. 5) (over)
